

FUSION4EVENTS.COM

SEO Implementation Checklist

Garba Mahotsav Munich 2026

A practical website-only action plan to improve Google discovery,
indexing and event search visibility.

Prepared for implementation - 12 August 2026

Priority 1 - Build the indexable event page

1. Publish a dedicated permanent URL

- Create <https://fusion4events.com/events/garba-mahotsav-munich-2026>.
- Use this page as the primary source for all advertising, social posts and partner links.
- Do not rely on a flyer image, Instagram profile, homepage banner or ticketing page as the only event source.

2. Add optimized metadata

- Title tag: **Garba Mahotsav Munich 2026 with Apexa Pandya | Fusion4Events**
- Meta description: **Join Garba Mahotsav Munich on 25 October 2026 at Zenith Kulturhalle. Live Garba, Dandiya, Bhajan and DJ with Apexa Pandya. Book tickets now.**
- Add a self-referencing canonical tag for the permanent event URL.

3. Use clear heading structure

- Use exactly one H1: **Garba Mahotsav Munich 2026 with Apexa Pandya & Live Band**
- Use H2 sections for event highlights, date and venue, artist, family facilities, tickets and FAQs.

4. Put event details in readable HTML

- Include at least 500-800 words of original, useful content.
- Display: Sunday 25 October 2026, 12:30 PM-10:00 PM, Zenith - Die Kulturhalle, Lilienthalallee 29, 80939 Munchen.
- Describe Apexa Pandya and her live band, Garba, Raas, Dandiya, Bhajan Sandhya, DJ music, parking, food, childcare, ticket categories and organizer contact details.

Required HTML snippets

```
<link rel="canonical" href="https://fusion4events.com/events/garba-mahotsav-munich-2026">
<h1>Garba Mahotsav Munich 2026 with Apexa Pandya & Live Band</h1>
```

Priority 2 - Help Google understand the event

5. Target relevant searches naturally

- Primary: Garba Munich 2026; Garba event in Germany 2026; Garba Mahotsav Munich.
- Secondary: Navratri Munich 2026; Dandiya night Munich; Indian events in Munich 2026; Apexa Pandya Germany 2026; Family Garba Munich.
- Place phrases naturally in the title, H1, subheadings, introduction and FAQs. Avoid repetitive keyword stuffing.

6. Add Event structured data

- Implement valid JSON-LD using the schema.org Event type.
- Include name, description, startDate, endDate, eventStatus, eventAttendanceMode, venue, full address, images, organizer, performer and ticket offers.
- Ticket offers should contain URL, price, priceCurrency and availability.
- Validate the live page with Google's Rich Results Test and fix all errors.

7. Optimize event images

- Use compressed WebP or optimized JPEG files and keep the hero image lightweight.
- Use a descriptive filename such as **garba-mahotsav-munich-2026-apexa-pandya.webp**.
- Add alt text: **Garba Mahotsav Munich 2026 featuring Apexa Pandya at Zenith Kulturhalle.**
- Set image width and height to prevent layout movement; lazy-load images below the fold.

8. Add helpful FAQs

- Answer common questions about tickets, venue access, parking, food, child facilities, dress code, event timing and what to bring.
- Keep answers visible on the page as HTML text.

Priority 3 - Make the website crawlable

9. Create robots.txt and sitemap.xml

- Publish <https://fusion4events.com/robots.txt> and allow crawling.
- Publish <https://fusion4events.com/sitemap.xml> and include the event page with its latest modification date.
- Reference the sitemap URL inside robots.txt.

10. Verify indexability

- The event page must return HTTP 200 and work without login.
- Remove any noindex directive and confirm robots.txt does not block the page or its images.
- Use a self-referencing canonical and ensure key content is present in the initial HTML.
- Avoid duplicate URLs for the same event.

11. Standardize the domain

- Use <https://fusion4events.com> as the preferred domain.
- Permanently redirect www to non-www and HTTP to HTTPS.
- Confirm the custom-domain and SSL settings in GitHub Pages.
- Ensure canonical tags never point to musudik.github.io.

12. Configure Google Search Console

- Verify the complete fusion4events.com domain property.
- Submit sitemap.xml and inspect the exact event URL.
- Run Test Live URL and confirm successful fetch, crawl allowed, indexing allowed and correct canonical.
- Request indexing, then monitor Page Indexing, Enhancements, Core Web Vitals, queries, impressions and clicks.

13. Strengthen internal links

- Link the event page from the homepage hero, navigation, Upcoming Events section, footer and related announcements.
- Use descriptive anchor text such as **Garba Mahotsav Munich 2026**, not Click here.

Priority 4 - Build authority and maintain quality

14. Publish supporting content

- Create pages for Garba Events in Germany 2026, Indian Events in Munich 2026, a Garba and Dandiya visitor guide, Apexa Pandya, and travel information for Zenith Kulturhalle.
- Link every supporting page to the main event page.

15. Add trust signals

- Publish an About page, Contact page, German Impressum, privacy policy and cancellation/refund policy.
- Show organizer contact details, official social profiles, partner names and sponsor information.

16. Improve mobile performance

- Target LCP below 2.5 seconds, INP below 200 milliseconds and CLS below 0.1.
- Compress the large flyer and hero assets, reduce unnecessary JavaScript/CSS, and preload only the primary hero image.
- Test the page on a real mobile connection before launch.

17. Preserve the URL after the event

- Do not delete the event page after 25 October 2026.
- Change its status to Event completed and add photos, a recap, video highlights and a link to the next event.
- This preserves backlinks, authority and historical relevance.

Launch checklist

- ☐ Dedicated event URL is live and returns HTTP 200
- ☐ Title, meta description, H1 and canonical are correct
- ☐ All event details are visible as HTML text
- ☐ Event JSON-LD passes the Rich Results Test
- ☐ Images are compressed and have descriptive alt text
- ☐ robots.txt and sitemap.xml are accessible
- ☐ Preferred domain redirects are working
- ☐ Event URL is submitted in Google Search Console
- ☐ Homepage and navigation link to the event page
- ☐ Mobile performance and layout have been tested
